- Questions?

```
file_in = open('book.txt', 'r')
text = file_in.read()
```

What is `text`?

A. A single string containing the entire contents of `book.txt`

B. A list with string elements, each element a line from `book.txt`

C. A string with a single line from `book.txt`

D. None of the above

```
file_in = open('book.txt')
text = file_in.readlines()
```

What is `text`?

A. A single string containing the entire contents of `book.txt`

B. A list with string elements, each element a line from `book.txt`

C. A string with a single line from `book.txt`

D. None of the above

```
file_out = open('cheer.txt', 'w')
file_out.write('Go, Cougs!')
file_out.close()
```

This code will result in a **new** output file containing the text
`Go, Cougs!`

A. True

B. False

C. Neither of the above
